

Re: Amendments to Application Number 10/801,864

July 21, 2004

(D) Remarks:

Applicant/Inventor respectfully requests that the current amendments to the specification may qualify to improve the description without being considered as new matter introduced in Application Number 10/801,864.

Applicant/Inventor respectfully requests furthermore that the current amendments to the claims 1. and 11. will be considered as a means to remove unnecessary restrictions from said claims 1. and 11. as formerly worded.

The amendments proposed in the present request brings the specification and the claims in Application Number 10/801,864, once amended, more in line with the specification and the claims in Applicant/Inventor's International Application Number PCT/US 04/15817 filed May 19, 2004 with the USPTO as Receiving Office.

Thank you in advance for your kind consideration of the above request.

Yours respectfully,
Romijn, Maarten Martinus, Applicant/Inventor

A handwritten signature in dark ink, appearing to read "M. M. Romijn", with a long horizontal flourish extending to the right.
